EDUCATION

Master of Science, Computer Science
University of North Carolina at Chapel Hill

August 2021 - May 2023

Bachelor of Technology, Computer Science
National Institute of Technology Tiruchirappalli

July 2014 - May 2018

PERSONAL PROFILE

As an AI Research Engineer/Scientist at Intel Labs, I specialize in developing multi-modal AI models that prioritize fairness and interpretability. With over 6 years of experience, I have contributed to advanced AI products like voice assistants and published in top-tier conferences. I am passionate about deploying production-ready machine learning systems and seek a role where I can further advance responsible AI development on impactful projects.

EXPERIENCE

Intel Labs

June 2023 - present

AI Research Scientist

- Developed and open-sourced an interpretability tool “CLIP-InterpreT” to explore the inner workings of foundational CLIP models.
- Created and published the first benchmark “SocialCounterFactuals” in CVPR 2024 to evaluate and de-bias intersectional biases in vision-language models which reduced existing biases by >20%.
- Published world’s first papers using *Gaudi2*, Intel’s flagship AI accelerators in top AI conferences like CVPR, NeurIPS and the models in these works were trained on large scale Gaudi nodes (>100 nodes).

Intel Labs

May 2022 - Aug 2022

Research intern

- Spearheaded the project “Improving Multi-modal Video Retrieval Using Multi-lingual Data” from ideation to prototype, model development, and paper writing.
- Published in ECIR 2023, a top Information Retrieval conference, and won the Best Student Paper Award and also the first work to leverage the Gaudi AI accelerator.

UNC Chapel Hill

August 2021 - Present

Graduate Research Assistant

Advisor: [Prof. Gedas Bertasius](#)

- Proposed a new interactive video retrieval system that leverages dialog with the users. The proposed approach requires minimum rounds of dialog to outperform the human dialog. The paper was published in ACM Multimedia 2022.
- Proposed interactive system outperformed static video retrieval models by 2.8 points in R@1 and 10 points in R@5. This system is the first to use generative models (BART, T5) to perform open ended dialog with the users.

UNC Chapel Hill

August 2021 - November 2021

Graduate Research Assistant

Advisor: [Prof. Shashank Srivastava](#)

- Explored the inductive biases in pre-trained language models for solving non-linguistic reasoning tasks.
- Proposed a set of 19 diverse non-linguistic tasks involving quantitative computations, recognizing regular expressions and reasoning over strings and published this work in EMNLP 2022.

Samsung R&D Institute India - Bangalore

June 2018 - July 2021

Senior Software Engineer on Bixby NLU

- Developed and deployed named entity recognition models in compliance with GDPR to identify user sensitive information like phone number, name, bank details etc. This model scaled to billions of user data and was deployed globally in samsung with access to sensitive information.
- Built a model which identifies utterance executed in a wrong application. This model is built with triplet loss and with a very less data of 150 samples for each application. This model identified misclassified utterances with 90% accuracy and across 10 applications.
- Collaborated with different product, engineering teams of Bixby globally (eg: korea, USA) for successful integration of AI models into samsung products.

IIT Patna

July 2020 - January 2021

Research Assistant

Advisor: Prof. Asif Eqbal

- Collaborated with Prof Dr.Asif Eqbal and proposed an End-to-End model capable of identifying slots from user utterances without external slot labels. This paper was accepted in the journal Multimedia Tools and Applications.
- Published one of the earliest works to use large scale pretraining in dialog systems which significantly improved slot identification accuracy and dialog generation.

National Institute of Technology, Tiruchirappalli

July 2017 - May 2018

Research Assistant

Advisor: Prof. Sivasankar

- Designed efficient lexicon based feature selection techniques that achieved excellent performance in resource scarce conditions. This work was published in the journal of multimedia tools and applications (> 80 citations).
- Conducted a systemic study on the advantages and disadvantages of statistical feature selection techniques vs neural network techniques (word2vec, Doc2vec). This work garnered more than 60 citations.
- Explored the possibility of combining text reviews with numerical ratings to design a hybrid recommender system.
